

Corporate Overview

The Power of Thinking Ahead

As the leading provider of predictive security intelligence solutions, CORE Security answers the call of organizations demanding a proactive approach to eliminating business risk. Our solutions empower customers to think ahead, take control of their security infrastructure, and predict and prevent IT security threats.

See security threats.

Proactively identify what's critical.

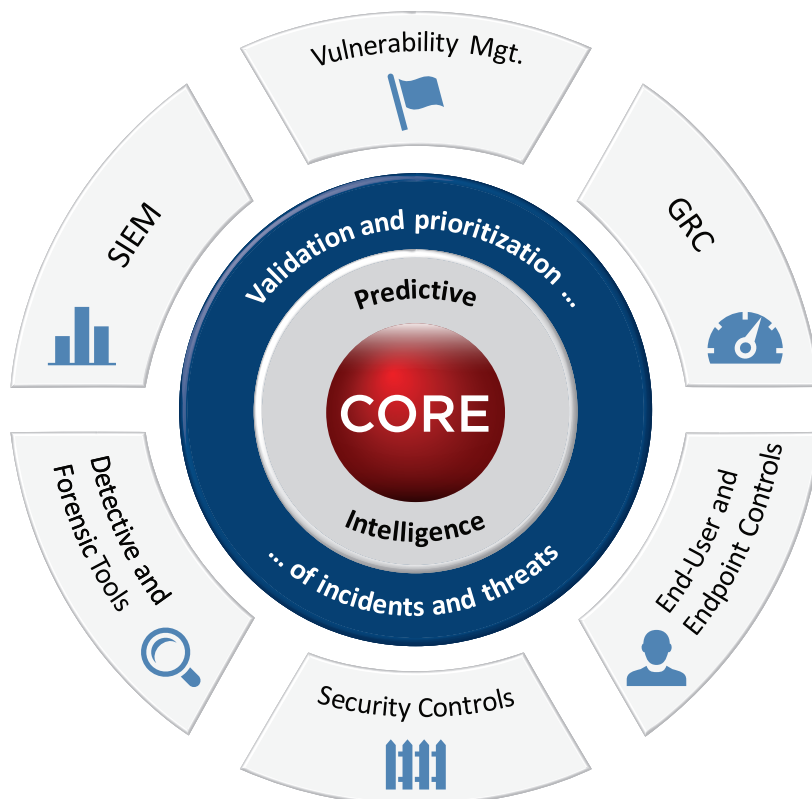

Take preemptive action where it matters.

Organizations have to predict security threats - not just react to them

Today, the majority of security spending is focused on solutions that take *defensive* or *reactive* approaches to threats. As a result, security teams are saddled with overwhelming amounts of disparate security data, tools that don't communicate, and alerts that sound only after the damage has been done. Organizations that seek to survive and thrive must go on the offensive and predict and preempt threats before it's too late.

We empower organizations to preempt business risk

At CORE Security, we believe the greatest risk organizations can take is to remain reactive to IT security threats. We therefore enable our customers to proactively identify critical threats and reveal risk in the context of specific business objectives, operational processes, and regulatory mandates. As a result, security teams not only predict threats but also more effectively communicate their implications to peers in the line of business.

Our predictive security intelligence platform unifies & strengthens security ecosystems

CORE solutions tap into the DNA of each customer organization, complementing and interacting with other key security solutions. Through real-time analytics, our solutions transform disparate security data into actionable information, enabling customers to get ahead and stay ahead of threats.

Our solutions amplify the value of security ecosystems by ...

- Pinpointing the most critical exposures amidst disparate data
- Verifying compliance and revealing the risks of non-compliance
- Evaluating end-user awareness & endpoint defenses
- Ensuring the efficacy of firewalls & other defenses
- Tracing paths from initial exposures to find subsequent business risks
- Assessing the severity of security alerts in business context

CORE Security Solutions

CORE INSIGHT ENTERPRISE

Enterprise-class predictive security intelligence platform

- Business risk identification, validation and prioritization
- Continuous threat simulation
- Proactive threat replication

CORE IMPACT PROFESSIONAL

Comprehensive vulnerability assessment and testing software

- Real-world, exploit-based security testing
- Network, web, client-side, wireless & mobile coverage

CORE WEBVERIFY

Web application testing software

- Automated testing of custom web sites and applications
- Proactive identification of OWASP Top 10 threats

CORE CLOUDINSPECT

Security testing SaaS for Amazon AWS cloud deployments

- Affordable, on-demand cloud security assessment
- No prior Amazon authorization required

CORE SERVICES

World-class security services

- Security consulting services
- Product implementation services
- Onsite and online training
- Customer support (24/7 available)

CORE Business Benefits

Align with corporate goals

- Protect brand, reputation and valuation
- Retain customers and avoid fines / penalties

Align with performance objectives

- Prevent system downtime
- Mitigate risks to intellectual property and customer data

Comply with policies and regulations

- Address PCI, FISMA/NIST, HIPAA, SOX, GLBA, etc.

Increase efficiency and effectiveness

- Increase security assessment scope and frequency
- Optimize headcount and consulting resources

Practice process excellence

- Conduct documented, repeatable security assessments
- Validate security using established best practices

CoreLabs Research

The CoreLabs research group discovers new vulnerabilities and engages in bleeding-edge technology development.

150+ vulnerability advisories since 1997

6 patents awarded / 7 pending

100+ research papers and presentations
