

Corporate Overview

Core Security is now the only company to bring to the market solutions that:

- Deter security risks through multi-factor authentication, identity and vulnerability analytics
- Detect and respond to compromises on the network from infected devices
- Remediate security risk through governing controls such as access provisioning and de-provisioning
- Validate security controls through compliance certification and pen testing

About

Enterprises are responsible for securing and managing access to corporate data and ensuring availability of enterprise applications and services at all times. Core Security offers threat-aware identity, access, authentication, network detection and response, and vulnerability management solutions to help identity, vulnerability, and network security and risk teams control access, reduce risk and maintain continuous compliance.

Our solutions provide actionable intelligence and context needed to manage access and security risk across the enterprise. By combining real-time insight into identity analytics with prioritized infrastructure vulnerabilities and detection of infected devices, organizations receive a more comprehensive view of their security posture. Organizations gain context and intelligence through analytics to make more informed, prioritized, and better security remediation decisions. This allows them to more rapidly and accurately identify, validate and proactively stop unauthorized access and defend against security threats.

Many alternatives lack strong integration with other enterprise systems and do not map vulnerabilities to operational systems and critical data. Businesses need to correlate risk exposure across identity and other security controls and provide strong multi-factor authentication capabilities to protect critical systems. Core Security's analytics-driven approach to security and remediation enables customers to manage access, identify vulnerabilities to minimize risks, and quickly detect infected devices on the network.

By sharing intelligence across various security disciplines, customers can automate manual processes. Using consistent data, prioritization methods and reporting, you will be able to cut remediation time, reduce risk and secure critical assets.

Core Security enables enterprises to take a more comprehensive and predictive approach to safeguarding critical data and assets.

Why Partner with Core

Partnering with Core Security should be an easy choice for you.

We are the only company in the security industry that can provide this holistic approach that brings together Network Detection and Response, Vulnerability Prioritization, and Access Intelligence to provide evidenced prioritization to help focus your precious resources on the most critical business risks to help minimize business loss and disruption.

Core Security is fast and flexible, which is what you need to be as security professionals. The Actionable Insight Platform can be deployed very quickly within days and can start providing value extremely fast.

We have deep research expertise. Our advanced exploit and threat intelligence researchers are constantly looking for new and emerging security threats in order to continuously add value to our products and to the industry overall.

Our Solutions

Core Network Insight delivers actionable information about known and unknown threats regardless of the infection's source, entry vector or OS of the device. It arms responders with definitive evidence so they can rapidly prevent loss on high-risk devices while blocking activity on the rest.

Core Vulnerability Insight unifies, regulates, and prioritizes vulnerability management initiatives enterprise-wide. Consolidating multiple vulnerability scans across vendors, while matching known exploits and simulating attacks, enables you to focus on the most vulnerable points of your network.

Core Impact gives you visibility into the effectiveness of your endpoint defenses and reveals where your most pressing risks exist across your network. This enables you to evaluate your organization's ability to detect, prevent, and respond to real-world, multi-staged threats.

Core Access Insight provides a comprehensive, real-time view of the multi-dimensional relationships between identities, access rights, policies, resources, and activities across a multitude of enterprise systems and resources.

Core Access is an integrated identity and access management solution that delivers informed provisioning, continuous compliance, and actionable analytics. This solution is needed to streamline provisioning, automate the governance process, and be able to view advanced intelligence to discover hidden risks.

Core Mobile Reset provides multifactor authentication for password resets. With Mobile Reset authentication you can combine a username and password with the one thing users always carry with them- their phone. Quickly deploy multi-factor authentication via a full suite of out-of-band channels including device login, SMS, Telephony, One-time Passwords and PUSH Notifications to ensure that access is controlled securely.

ABOUT CORE SECURITY

Core Security provides market-leading, threat-aware, identity, access and vulnerability management solutions that provide actionable intelligence and context needed to manage security risks across the enterprise. Solutions include multi-factor authentication, provisioning, Identity Governance and Administration (IGA), Identity and Access Intelligence (IAI), and Vulnerability Management (VM). The combination of these solutions provides context and shared intelligence through analytics, giving customers a more comprehensive view of their security posture so they can make better security remediation decisions and maintain compliance

Core Security is headquartered in the USA with offices and operations in South America, Europe, Middle East and Asia. To learn more, contact Core Security at (678) 304-4500 or info@coresecurity.com.
