# CORE Role Designer
## powered by SONAR

**Benefits of
Core Role Designer:**

- Visualization-first approach enables you to make intelligent decisions

- Get deep understanding on the relationship between people and their access

- Identity and Access Management system agnostic.

## Enabling best in class Role-Based Access Control for your Organization

A fully deployed Roles Based Access Control (RBAC) program promises to deliver improved compliance, more efficient provisioning, and increased security posture for your organization. However, most companies struggle with step 1 of developing such a program – designing the right roles for the right people. RBAC projects tend to fail because we end up deploying inefficient roles or are unable to design roles for every part of the company in a timely manner. The real problem is that we cannot see the relationship between people and the entitlements that they have in order to build the roles in the first place. If you cannot see that interrelationship not only can you not create the right roles, you also cannot manage them either.

Core Role Designer brings an innovative, new approach to designing roles. Our visualization-first approach allows role creators to make intelligent decisions about which entitlements should be included in a role, and which users should be assigned to this role. Core Role Designer's visualization shows logical groupings of people and entitlements that give you the intelligence, the power, and the control to help you create the right roles for your organization.

Core Role Designer also allows you to develop roles based on more than just job codes. It has the ability to understand multiple dimensions about the user to deepen your understanding about why the user should or should not have specific access.

# Core Role Designer enables you to:

- **Make intelligent decisions:** Gain deep understanding about people and the access they have to create the best roles possible for the whole organization.

- **Create roles for all of your systems:** Cross-system analysis means you can create roles that contain entitlements to any number of systems. There is no dependency on integrations with obscure applications.

- **Work with any Identity and Access Management solution:** Core Role Designer is tool agnostic and can work with your existing provisioning and governance solutions.

- **Get going. Now.** No professional services required for implementation. Start designing roles in no time.

With Core Role Designer, you can be more effective, efficient, and compliant when deploying roles in your organization. If you'd like to learn more about this new product or see it in action, please contact us at (678) 304-4500 or info@coresecurity.com.
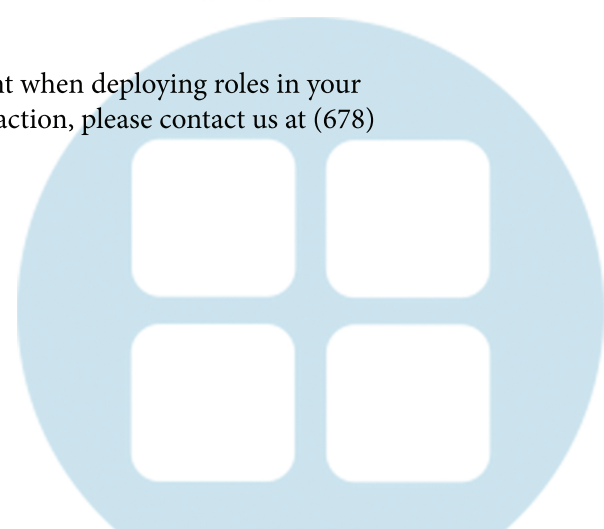

## About Core Security Corporation

Core Security provides companies with the security insight they need to know who, how, and what is vulnerable in their organization. The company's threat-aware, identity & access, network security, and vulnerability management solutions provide actionable insight and context needed to manage security risks across the enterprise. This shared insight gives customers a comprehensive view of their security posture to make better security remediation decisions. Better insight allows organizations to prioritize their efforts to protect critical assets, take action sooner to mitigate access risk, and react faster if a breach does occur.

Core Security is headquartered in the USA with offices and operations in South America, Europe, Middle East and Asia. To learn more, contact Core Security at (678) 304-4500 or info@coresecurity.com.
